

Abstract

The present invention provides a novel compound having an excellent JNK inhibitory effect. That is, it provides a compound represented by the following formula, a salt thereof or a hydrate of them.

Wherein R^1 designates $-(CO)_n-(NR^a)_j-(CR^b=CR^c)_k-Ar$ (wherein R^a , R^b and R^c each independently designate a hydrogen atom, a halogen atom, hydroxyl group, an optionally substituted C_{1-6} alkyl group or the like;

Cy designates a 5- or 6-membered heteroaryl; and

V each independently designate the formula $-L-X-Y$ (wherein L designates a single bond, an optionally substituted C_{1-6} alkylene group or the like; X designates a single bond or the formula $-A-$ (wherein A designates NR^2 , O, CO, S, SO or SO_2) and so on; and Y designates a hydrogen atom, a halogen atom, nitro group or the like).
